Patient Data Maturity Brings Business Benefits

“

Currently, the patient data landscape stands largely fragmented. EHRs (Electronic Health Records) contain multiple fields of mostly unstructured data, and the industry is only beginning to move towards standardization

Data-driven Healthcare Empowers Care of the Patient

“

Unification of patient data within big data platforms is enabling care providers to bring a complete and exhaustive picture of their patients to the doctors, and AI-powered prescription rule checkers scan for interactions, efficacy, and effectiveness of treatment plans for each patient

Care Provision Orchestration Goes Nimble

“

IoT-originated data has shown promise in healthcare administration functions like scheduling patient visits, maintaining sanitization standards, equipment utility tracking, and predictive maintenance of expensive equipment. However, front-facing functions remain largely human-driven
